-- a teaching jig mounted on the placement portion of the robot in place of the object during a teaching operation and having an image pickup member, the teaching jig having a positioning mechanism with respect to the placement portion; wherein the positioning mechanism in the carrier robot system further comprising a hole, a pin, or a letter pattern --.

As for claim 2, lines 5, the phrase, " shifting the robot to a position where the image pickup member can detect a characteristic part existing in the vicinity of the predetermined placement portion" has been replaced with the phrase

-- shifting the robot to a position where the image pickup member can detect a characteristic part existing in the vicinity of the predetermined placement portion; wherein the characteristic part existing in the vicinity of the predetermined portion is a hole, a pin, or a letter pattern--.
